

A digital platform geared towards adding value to academic research and maximising the impact of scientific activity.

## Main Features

### INTRODUCTION

Mission & Objectives  
News & Events  
Contacts

### PROJECTS

Description of the project  
Research Team  
Funding & Partnerships

### PEOPLE

Member Pages  
Member Profiles  
Contacts & external links

### RESEARCH GROUPS

Presentation & Goals  
Team Members  
Team's Scientific Production

### PUBLICATIONS

Citations of publications  
Research by title & author  
ORCID, DOI, etc. references

### INTEGRATIONS

Google Scholar  
Import and export BIBTEX  
API for native apps

## Why?

- Customizable & responsive design
- Multilingual
- Users & permissions management
- Content moderation system
- Restricted section to share private files
- Enhanceable & scalable
- Security monitoring system
- Open Source software
- Built in Drupal, used by the Universities of Oxford, Harvard, etc.

## FAQ

### How much does it cost?

Omibee Research is a free software package that can be downloaded on Github. We only charge for the implementation of the platform. Customization and design features have additional charges.

### Who owns the software?

Omibee Research's source code is free and can be downloaded, changed and shared without any restrictions. Customized code belongs to the entity that required and paid for the development, unless they expressed their willingness to share it publicly.

### Who owns the data?

The entity owns and is liable for the information gathered. Omibee cannot disclose or dispose of the entity's data.

### Where is the platform hosted?

Unless otherwise required by the entity, and to be able to access the security monitoring system, the software runs on a dedicated AWS instance.

### Are there any maintenance costs?

The cost of domain registration and hosting will be paid by the entity. Prices for web hosting start at 10€/month. For more information, please check AWS. We do not charge for any maintenance service that hasn't been required by the entity.

### Can we change our minds?

Absolutely. The source code is free after all. Drupal, PHP and Symfony are technologies used by thousands of developers worldwide, which means there's no lock-in with our services.

Any additional questions?
